
First Flex4000 Wide Format Printer Sold in Europe

Following a successful launch in Milan in September, we have sold the first high-resolution inkjet printing system Flex4000, in combination with FlexMail 3 mailing software in Europe. The integrated system prints up to 1200 dpi over a 4.25" print width. Stitching two or more systems allows for even wider print widths. Both our UK and Dutch resellers are actively promoting the system with DM campaigns in their countries. [Read more on Flex4000](#) or [contact us](#) directly for more information.

New Ink For Semi- and Non-Porous Substrates

As of now, we have a new pigmented ink available – PCV Black - that has been specially developed for printing on semiporous and non-porous media. The ink performs particularly well on PVC-containing media. In addition, it offers good inkjet quality on porous media like wood. In general PCV ink delivers exceptional durability and permanence on many media. Will PCV ink be the solution for your printing application? [Contact us for a sample request](#).

Application Story: IPS and Antares Comply with Pharma Tracking Laws

GTIN: 08691234567890
Serial: 1323424679
Date: 19th of January 2007
Batch: X2512061322

Leading supplier of pharmaceutical vision systems Antares Vision from Brescia, Italy, has selected Array Graphics' IPS package coding solution to print Data Matrix codes onto cartons as part of their ATS tracking system. IPS and Antares Vision are the first to comply with Turkish pharmaceutical laws on serialisation and product tracking. Read our [full Pharma Coding Application Story in pdf](#).
